

Go-to-Market Playbook

How we get to the first 1,000 — then 10,000 — users.

Positioning · UGC engine · Influencers & newsletters · Growth ladder · Budget

THE WEDGE

Everyone helps you apply. Prowl helps you get noticed.

The one-liner

“Stop applying into the void. Prowl builds a personalized video pitch to the hiring manager — in your voice, about their company — in one click.”

Our unfair advantage

The product's output IS the ad.

Every pitch video a user makes is a share-worthy artifact (“look what this made for me”). That's a rare product-led + content-led loop — lean into it.

Why now: AI made inboxes noise. Standing out needs a pattern-interrupt — and Gen Z already treats video as a resume.

B2C-led, with a B2B channel behind it

- **New grads / early-career**

Highest volume, most active on TikTok/IG, most willing to try a novel tool. Our beachhead.

- **Tech layoff / “open to work”**

High intent, story-driven, live in communities. Emotionally resonant content.

- **Career switchers & bootcamp grads**

No pedigree → need differentiation → Prowl is their edge.

- **International / visa seekers**

Must over-index on standing out. Underserved.

B2B track (second): career coaches & resume writers (referral), bootcamps & universities (cohort deals), creators as affiliates. Land these with B2C proof.

Four compounding growth loops

1

Artifact loop

Users share pitch videos → viewers discover Prowl
→ sign up → share.

2

Win loop

“I got hired with Prowl” testimonials → social proof →
more signups.

3

Referral loop

Give a friend 3 free hunts, get 3. In-product,
compounds.

4

Creator loop

Affiliates earn → post more → recruit other creators.

Three streams, shipped daily

A · Founder / brand

You (or a face-of-brand) post daily.
Home of the “you won’t believe this tool” demo format. Build-in-public.

3–5 posts/day

B · AI-UGC at scale

Mass-produce “creator talks about the tool” ads with Arcads / Creatify / Captions / HeyGen. 20–30 variants, kill losers in 48h.

~\$40–150/mo

C · Real UGC

Engineer it: in-app share moment, “got the interview” testimonials, \$50–100 bounties for 10k-view clips.

Most trusted

Treat it as an experiment engine, not a broadcast: find the 1–2 hooks that pop, then pour fuel on winners.

Reel & TikTok ideas

- **“Applying is dead”**

“I stopped applying and did THIS instead” → screen-record the one-click pitch video.

- **Before / after the void**

“200 applications, 0 replies. Then I sent this.” Ghosted inbox vs. a reply.

- **“Genius or illegal?”**

Demo the company research + mockup. “It researches them and mocks up what you'd build.”

- **Recruiter reacts**

Ex-recruiter creator rates an AI pitch video. Authentic + mild controversy = reach.

- **Watch me get hired (series)**

Serialized docu-loop using Prowl end-to-end. Ends on the real interview.

- **\$0 vs \$500 coach**

Compare a coach's advice to what Prowl does free. Value-framing.

THE FORMAT

The 5-beat reel (20–35s)

- | | | |
|---|----------------|---------------------------------------|
| 1 | Hook (0–2s) | Pattern-interrupt claim or visual |
| 2 | Problem (2–6s) | The void / rejection / silence |
| 3 | Reveal (6–12s) | Screen-record Prowl doing the magic |
| 4 | Proof (12–25s) | The actual video/pitch page on screen |
| 5 | CTA (25–30s) | “Link in bio, free to try” |

Example script

“Okay this is either genius or illegal. I pasted my resume... clicked one button... and it made a personalized VIDEO pitch to the actual hiring manager — in my voice — and researched their product to mock up what I'd build for them. I'm not applying the normal way ever again. It's free, link in bio.”

AI-UGC tools (make 30 variants, not 30 creators)

Arcads

Most natural AI UGC avatars — micro-expressions, gestures.
Best for direct-response ad variants.

Creatify

Paste a URL → auto script + avatar + assembled ad. Great for volume.

Captions

Talking-head + auto-captions + B-roll in one app. Ideal short-form.

HeyGen

Already in your stack — reuse the pipeline to spin ad variants at scale.

Play: 20–30 script variants (same CTA) → render → run as Spark Ads / Reels → kill losers in 48h, scale winners.

Who spreads the word

B2C · Career creators (TikTok/IG)

Wonsulting (Javier/Lee) · @careervidz (4.6M) · @maxklymenko (9.1M) · @careercoachdarci · @hannahgetshired · @rob_cancilla · @carminemedia

B2C · AI-tool creators

“AI tools you need” roundup creators (10k–500k). Source via TikTok Creator Marketplace + #aitools. Native fit for our demo.

B2B · Founders / SaaS (X/LinkedIn)

Jason Lemkin (SaaStr) · Chris Walker · build-in-public: @levelsio, @marc_louvion, @arvidkahl. Amplification, not core.

Rates: micro career creators ~\$150–800/post; mid \$800–3k; AI-tool slots \$200–1k. Always secure usage rights to re-run as paid Spark Ads.

Newsletters to sponsor · communities to seed

Newsletters

- Career/jobs-native (best fit): Hey Marketers, No CS Degree, NoCommute, Remote Age, HeyDesigner
- Broad tech for scale: TLDR, Morning Brew, The Hustle — test one placement first
- Browse audited audiences + rates via Paved and SponsorGap
- Track every placement with a unique promo/UTM code

Communities

- Reddit: r/jobs, r/cscareerquestions, r/layoffs, r/EngineeringResumes
- Blind (teambind) — tech, high intent, layoff threads
- Slack: Tech404, Women in Tech Network (~70k), Elpha, layoff-support spaces
- Find more via thehiveindex.com. Rule: give 10x before you ask once.

THE PLAN

0 → 1,000 → 10,000

Phase 0

Pre-launch (wk 0–3)

- Ship in-app share moment + hashtag
- 30 AI-UGC variants + 15 founder reels
- Seed 10–15 micro career creators
- Warm up Reddit/Slack; prep Product Hunt

Phase 1

First 1,000 (wk 3–8)

- Product Hunt launch (top 3)
- 3–5 posts/day; double down on winners
- Value-first community seeding
- Boost best clips: Spark Ads \$20–50/day

Phase 2

1k → 10k (mo 2–5)

- Pay to scale top videos (\$1–3k/mo)
- 3–5 niche newsletter sponsors
- Roster → 30–50; ambassador program
- Open B2B: coaches & bootcamps

RESOURCING

Lean budget & the metrics that matter

\$3–6k

per month, lean start

3–5/day

short videos shipped

<25%

activation = fix before spend

48h

kill window for ad variants

North-star + guardrails

Weekly activated users (resume → pitch) · share rate · viral coefficient · CAC by channel · reply / interview rate

Spend: ~\$1.5–3k paid amplification · \$0.5–1.5k newsletters · \$0.5–2k creators (mostly affiliate early) · ~\$150–300 tooling.

Do these first

1

Ship the in-app share moment

One-tap “share your Prowl video” + pre-filled caption/hashtag after render. The loop that makes everything compound.

2

Add “Made with Prowl” to pitch pages

Tasteful, user-toggloable attribution on shared artifacts = your cheapest acquisition channel.

3

Produce the first 30 AI-UGC variants

Connect Arcads/Creatify (or HyperFrames/Descript) and batch the 6 hooks in this deck.

4

Line up 10 micro career creators

Free Pro + affiliate link + a ready-made 30s demo clip. Low friction = more yes.
